Lab1: Descriptive Paper of ODU Spring 2019 CS411 Team Silver Project

Crime HotSpot

CS411W Spring 2019 Team Silver
Professor: Thomas Kennedy
Author: Raphael J. Sandor, Kenneth Watson, Stephanie Zeil, Thom Loftin, Vairon Mendoza, Dave Hall, Kevin Chahine, G-Man
Submission Date: 1/21/2019
Version Number: 1.0

Table Of Contents

1. Introduction

Description of crime mapping and Crime HotSpot.
- The need for publicly available crime mapping software
  - Personal Safety
  - Hearsay vs fact-based knowledge concerning crime

Background of what the current problem is:
- Differentiating violent crimes from nonviolent crimes
  - Difference between crimes occurring and the risk of crime impacting user
- Cluttered interface/information overload

Characteristics of an ideal solution:
- Provides context to data
  - Crimes shown relevant to user
  - Different crimes are weighted differently
- Conveys information in a meaningful and understandable way
  - Minimal clutter
  - Provides relevant statistics that complement map
    - Method for comparing areas

2. Product Description

- Discuss what a heat map is, why we are using one, what advantages that has compared to the problem we mention with traditional tools.
- Solution flow:
  - Simplify crime mapping
  - Reduce data noise
  - Visualization of crime statistics

2.1. Key Product Features

2.1.1. Crime Statistics

2.1.2. Geographical Crime References

2.1.3. Crime Heatmap

2.1.4. SafetyScore

2.2. Major Components

2.2.1. Crime HotSpot Website

2.2.2. Google Maps API

2.2.3. Crimes Database

2.2.4. Application Server

3. Identification of Case Study

- The general public
- Businesses
- Local Governments/Non-profit organizations

4. Product Prototype Description

5. Glossary

5.1. Heatmap - a representation of data in the form of a map or diagram in which data values are represented as colors.

5.2. SafetyScore - A number, proprietary to Crime HotSpot, that represents the relative safety of an area.

5.3. Crime Map - A map that has crime statistical data overlaid on it to provided information on the criminal activity of an area.

5.4. Javascript MEAN Stack - MEAN is a free and open-source JavaScript software stack for building dynamic web sites and web applications. The MEAN stack is MongoDB, Express.js, AngularJS (or Angular), and Node.js.

5.5. JavaScript Object Notation (JSON) - a lightweight data-interchange format. It is easy for humans to read and write. It is easy for machines to parse and generate. It is based on a subset of the JavaScript Programming Language

5.6. Application Programming Interface (API) - a set of functions and procedures allowing the creation of applications that access the features or data of an operating system, application, or other service.
